

The Earth Environment and Frontiers
This is ISS, go ahead

400 km above us is the amazing International Space Station (ISS) built with the cooperation of 15 countries. We will think about the meaning of humans expanding our humanosphere to the universe by contemplating the exhibit's concept.

Permanent Exhibition > This is ISS, go ahead [The Earth Environment and Frontiers]

Where can YOU live?

First, we will learn about an environment in space where human beings are able to live. By doing so, we will think about the place and the environment where ISS exists by looking at the position of ISS at its altitude of 400 km above ground and ponder the universe which is so much further away.

How can YOU live on the ISS? (Space Habitation Module, etc.)

Fundamentally, ISS challenges an unforgiving environment where people cannot live unassisted: what makes life there a reality is the latest technology. Through research activities and life at ISS, we will think about what is essential in order to live in a community built outside the boundaries of Earth.

What can YOU perceive away from the earth?

We will convey messages from various people who work with the ISS such as researchers, astronauts and the staff that is responsible for the project's operation and control to allow you to contemplate what ISS means for humanity and what it means for humans to travel to and live in space.

Supervisor	Shigeru Ida (Tokyo Institute of Technology) Tai Nakamura (Japan Aerospace Exploration Agency /JAXA.) Shinichi Watari (National Institute of Information and Communications Technology)
Premiered	July 2008

Symbol Exhibit

- Geo-Cosmos

The Earth Environment and Frontiers

- Earth Environment and Me
- Exploration
- Space and Time
- Extreme Environments
- This is ISS, go ahead

Life Science

- The Genome
- The Brain
- Promoting Medicine Together
- Life Science Laboratory

Innovation and the Future

- Robot World
- The Drive Force of Innovation
- Lifestyle 2050

Information Science and Technology for Society

- A Hands-on Model of the Internet
- Songs of ANAGURA
- Laboratory for New Media
- Tearoom of Zero/One

- Theaters
- Science Workshop
